RED RADIANCE

From the City of Roses

FROM the city where Roses thrive as in no other part of the South, where appreciative home people have planted them by thousands and enjoy an almost year-round feast of beauty and fragrance, come the Rose-plants described in this folder.

Grown in the congenial climate and soil which have won Thomasville its fame as "The City of Roses," the plants we grow and sell are ideally adapted to flourish wherever Roses can be grown at all. From them will come great fragrant flowers for vases and bouquets and an almost continuous display of colorful bloom in the yard or garden.

FOUR EXQ

The Radiance Roses

THE original Radiance Rose, pictured below, is by far the most popular Rose in America, and even from far-off Australia come letters and stories of its perfection and beauty.

The plant is one of the most vigorous of all the Ever-blooming Roses, flowering without a break throughout the entire season, making a perfect planting for an ornamental garden, or for low hedges, or a planting in front of a porch. Its beautiful, smooth foliage stays green and fresh longer than almost any other variety, and its lovely buds and fragrant flowers are a continual joy and delight.

The original Rose, whose name is simply **Radiance**, is brilliant pink with a slightly silvery tone on the sheen of its reflexed petals. It is especially lovely when cut and is by far the most dependable outdoor Rose for that purpose, with the possible exception of—

Red Radiance, which is exactly like the original variety except that the flowers are bright, sparkling cherry-red,

RADIANCE

UISITE ROSE

MRS. CHARLES BELL

with the same exquisite form and sprightly fragrance. In a vote taken recently by Rose-growers all over the United States, Red Radiance stood next to Radiance at the top of the list of favorite varieties. With Radiance and Red Radiance belongs—

Mrs. Charles Bell, which presents one of the most charming colors known in Roses. It is pale flesh-pink or shell-pink, verging to salmon, and it is utterly without a rival or an imitator in its own particular hue. In form and in character of the plant it is exactly like Radiance. These three varieties form a group with which even the veriest beginner can succeed, harvesting lovely flowers with a minimum of care and previous knowledge.

To the group of utterly dependable Roses we add **Frau**

VARIETIES

Karl Druschki, which is the most perfectly formed pure white Rose in existence. The plant grows with great rapidity and strength, blooming continuously and profusely. Its enormous buds are slightly pinkish at first, opening slowly with delicately recurving and overlapping petals to very large, high-centered blooms of purest white, one of the loveliest things in creation.

With the three Radiance Roses, it can be relied upon for cut-flowers almost every day, and its splendid health and growth insure success in almost any garden with least possible care.

A Rose-garden, be it large or small, planted with these four varieties will be a year-round delight and recreation.

We have selected for our customers the varieties which are easiest to grow, whose beauty of form and color have made them favorites throughout the world. By specializing upon only these few varieties, we can grow them to perfection and give you better value for the money than would be possible under other circumstances.

FRAU KARL DRUSCHKI (White American Beauty)

The Care of Roses

DO NOT plant Roses in soil that is always wet; they like good drainage. Make the bed where they are to grow as rich as possible, but do not use raw, fresh manure. Put in old cool manure or commercial fertilizers. Dig the bed deeply—18 inches or more—and plant the Roses carefully, spreading the roots out horizontally and packing the soil about them firmly, making sure that they are not cramped, bunched or twisted. Water them thoroughly at first.

When planting cut off the tops pretty closely, leaving 6 inches or so of stems in order that the blooms may be larger and finer and that the plant may establish itself more easily and quickly.

If the best possible flowers are wanted, feed the plants with some fertilizer frequently during the blooming season, and keep the blooms cut with long stems.

PRICES ON ALL ROSES

For No. 1 Grade of 2-year, field-grown Rose bushes

Prepaid, \$1 each; \$4.50 for 6; \$8 per doz.

Charges Collect, 70 cts. each; \$3 for 6; \$5 per doz.;
